Abstract (en)  
[origin: EP1234918A2] Shower device comprises a hand shower (2), an upright, curved holding tube (10) designed as a holding device for the hand shower, and a flexible hose (20). The hose can be removed with the hand shower from the holding tube. The holding tube in the region of the neutral fiber has a longitudinal slit (100) on one side. The showerhead (24) has a neck part with a guide part having a shape corresponding to the cross-section of the hollow space of the holding tube. The guide part is axially inserted in and removed from the holding tube and engages in the longitudinal slit with the neck part so that the hand shower is held by the guide part in any axial position in the holding tube and the showerhead lies near the holding tube. Preferred Features: The holding tube is more curved in the upper region than in the lower region.
