Abstract (en)

[origin: EP1234934A2] Door handle comprises a lock cylinder (20) arranged in a recess of a fixed support (11) on the inner side of the door. The support has a stop (50) for the lock cylinder and the stop can be adjusted between two positions. A movable screen positioned on the support is able to move between two positions. The stop protrudes into the moving path of the screen in its open position and prevents return of the screen to its final position. The screen covers the stop opposite the door folding hole. Preferred Features: The screen consists of profiled slides which are guided on the side of the support.
