Abstract (en)
A concealed-type slidable, adjustably opening hinge, in particular for articulated joints in doors and windows of residential buildings, as well as for doors of furniture pieces, and the like, comprising a plurality of sectors (9) that are separated from and capable of cooperating with each other so as to vary the angle of rotation of the hinge between the open and closed positions of said doors and windows, under interposition of anti-friction means (17, 27, 29) therebetween, and comprising means (20) for delimiting the opening extent of the hinge, in which said means are adapted to enable said sectors (9) to only displace within said open and closed positions. <IMAGE>
