Abstract (en)
[origin: EP1234943A2] The frame profile arrangement, particularly for installation as an arch or pane or panel frame, has a frame profile (1) with at least one profiled surface (2), in which a recess (30) is provided. In the recess is fixed a drive housing (10) of a positioning drive, particularly for operation of a fixture. The drive housing has profilings (11-13) on the side of the profiled surface, which are aligned with the profilings (7-9) of the frame profile. The profiled surface is formed on the rabbet side of the arch or panel or panel frame profile. On the profiled surface at least one back-cut groove (9) is formed and the groove walls of the drive housing are aligned with those of the frame profile.
