Abstract (en)
[origin: US2003075813A1] The invention relates to a carbonating device for charging a liquid with a pressurized gas. Carbonating devices of this type are generally used for adding carbon dioxide or CO₂ to tap water or so-called still water. According to the invention, the pivotal filling device can be locked into a so-called pivotal position in a manner that makes the inventive carbonating device easier to handle than commercially available carbonating devices. The invention provides that the pivotal filling device can be firstly brought into the pivotal position and locked in place by using one hand. Afterwards, the water bottle can be clamped or screwed onto the filling device by using both hands. Together with the water bottle, the filling device is then released from its locked position and placed into the so-called filling position.
