Abstract (en)  
[origin: WO0138720A1] The invention relates to a valve for controlling liquids, comprising a first valve element (6), which controls the impingement of a pressure upon a high-pressure chamber (15), a control element (3), which controls the actuation of the first valve element (6) and a second valve element (8), which controls the impingement of a pressure upon a valve member (26). According to the invention, the control element (3) is configured as a piezo actuator and also controls the actuation of the second valve element (8).
