Abstract (en)

[origin: WO0142703A1] The invention concerns pipes consisting of a tubular body (1), provided with members for connection (2) to a pressurised fluid circuit, and a sheath (5) designed to enclose the tubular body. The invention is characterised in that the sheath (2) is integral with at least two longitudinal cables (6, 7) extending beyond its ends and whereof the ends (6a, 6b, 7a, 7b) are provided with means to be locked to an element separate from the corresponding connection member (2).
