Abstract (en)

[origin: WO0125912A1] Software development tool that simplifies a graphical representation of software code for a developer. The software developer tool provides the developer with a more coherent, manageable, and abstract graphical view of the project model (Figure 3, #302), and facilitates the developer in graphically debugging and editing the associated software code (Figure 3, #304). The improved software development tool detects a group of related elements in the code, and collapses a portion of the graphical representation of the code associated with the group of related elements (Figure 3, #312).
