Abstract (en)

[origin: WO0143154A1] The invention relates to a circuit breaker with comprising flow sensors for determine measuring flowing through switching, and an electronic overcurrent release device for processing signals pertaining to the flow sensors. An information memory embodied as a Memory Button transfers characteristic values pertaining to the circuit breaker and/or flow sensors to the overcurrent release device. Various additional functions, e.g. registration of unusual procedures including date permissible number of make-break operations are also possible.
