Abstract (en)

[origin: WO0143460A2] The invention relates to a mobile radio telephone terminal comprising a first SIM card reading device or comprising a connection for a first SIM card reading device for reading a first SIM card. Said terminal is also provided with a second SIM card reading device or with a connection for a second SIM card reading device for reading a second SIM card. The mobile radio telephone terminal is designed in such a way that a transmitting and/or receiving using the first SIM card can be carried out independently of a transmitting and/or receiving using the second SIM card. This feature enables a very efficient and universal realization of traffic telematic processes in a mobile radio telephone device.
