Abstract (en)

This invention relates to wiper apparatus (6) for use on a helmet (2) or for use with an attachment for a helmet (2). The wiper apparatus (6) includes a wiper blade (30) and drive means for driving the wiper blade (30) from side to side across a visor (4) of the helmet (2). First and second elongate members (12, 14) are provided which are connected together and which are pivotally mounted on the helmet (2) or on the attachment connected to the helmet. The drive means is connected to one of the first and second members (12, 14) and the other of said members has a free end (28) to which the wiper blade (30) is attached. The movement of the first and second members (12, 14) results in movement of the wiper blade (30) across the visor (4). <IMAGE>
