Abstract (en)  
A band fastener with continuous regulation, to be applied, in particular, to accessories, items of clothing and sports footwear as well as to body-protection clothing and footwear, in which prevention against a possible loosening, a continuous and micrometric regulation and a rapid unfastening must be guaranteed. Said fastener being characterised in that it comprises a toothed band (2) which interacts with a disk (3) equipped with a protruding profile (6); such a band and such a disk are contained inside a box-shaped body (4), thus constituting a fastening mechanism between two flaps to be drawn together, where a first flap is attached to the base of the box-shaped body (4) and the other flap is attached to the non-engaged end of the band itself. <IMAGE>
