Abstract (en)

A power drill/driver (6) is formed from a plurality of components. Two mirror-image body portions (2, 4) are brought together about a centre line and then a shrouding (34) is placed over the rear indented portion (28) of the composite tool (6). The tool so formed has greater structural rigidity than a tool formed from conventional clamshell or body halves without such a shrouding thereover. <IMAGE>
