Abstract (en)
[origin: WO0143588A1] The invention relates to a table comprising a table-top (1) and at least one folding table leg (2) which is mounted onto the table top using a jointed fitting (3). Said jointed fitting has a first joint section (3.1) fixed to the table-top and a second joint section fixed to one end of the table leg. The two joint sections are interconnected in an articulated manner to execute the folding movement. In addition, a locking device is provided for locking the table leg in the folded-out position. The locking device is designed as a locking sleeve (2.1) which is mounted so that it can be displaced between a release and a locking position in relation to the jointed fitting. The locking sleeve is formed by an end section of the table leg.
