Abstract (en)
[origin: WO0141666A1] The present invention relates to a sterile syringe package (1). The sterile syringe package (1) has a sterile sheath (30) which sealingly encloses a sterile syringe (20). The sterile sheath (30) has an opening portion (32) defined by a surrounding edge portion (34) of the sterile sheath (30). The sterile syringe package (1) also has a fitting member (50) removably connected to a luer or needle fitting coupled to the sterile syringe (1) and sealingly fixed with the surrounding edge portion (34) of the sheath (30) forming an enclosed syringe chamber (36) for housing the sterile syringe (20). The sterile syringe package (1) can have an envelope member (70) to enclose the sterile sheath (30) and the fitting member (50) therein. Alternatively, a sterile barrier plug may be used to close the fitting member (50).
