Abstract (en)
[origin: WO0143799A1] The invention concerns a syringe comprising a syringe body (2) including an elongate barrel (4) containing a volume of medical fluid (44), one first end forming a hub (16), designed to co-operate with a needle of said syringe, a second end (6) opposite the hub and a plunger (28) mobile relative to said hub. The second end forms a closed base (6) and the plunger (28) is entirely housed inside the barrel (4). Said syringe body is inexpensive, easy to produce, provides satisfactory fluid-tightness and prevents all microbial migration towards the medical fluid.
