Abstract (en)  
[origin: WO0139989A1] The invention relates to a printed object, preferably a leaflet or the like, comprising a single, continuous sheet (3a) of paper or similar material, and a blank for producing such a printed object, and a use of the same. The sheet (3a) is in the complete printed object folded along one or a plurality of primary folding lines (18, 19) extending between two opposing edges (8a, 9a) of the sheet. According to the invention, a locking tab (4a) extends with a first portion (10a) from one edge (8a) of the object along one side of the object parallel to the primary folding lines (18, 19) substantially to the other edge (9a) of the object, and with a second portion (11a) around said edge and back along at least part of the other side of the object. The blank for this printed object is characterized according to the invention in that a locking tab (4a) is formed integrally with the sheet (3a) and extends from one edge (8a) of the sheet substantially parallel to at least one primary folding line (18, 19) and has an extension in the longitudinal direction of the folding line which is larger/greater than the extension of the folded printed object in said direction, and is provided with a folding line (12a) dividing the locking tab in a first portion (10a) and a second portion (11a). The use of the printed object is characterized according to the invention in that the printed object is attached to the outside of a package, e.g. by gluing, with the free portion of the locking tab facing the package.
