Abstract (en)
[origin: WO0144678A1] The invention relates to a friction lining for wet running. The inventive lining consists of a tissue that can be mounted on a carrier (6) and is partially impregnated with a resin. The aim of the invention is to provide advantageous friction conditions. The porosity of the tissue (1) that is impregnated with a resin is greater in the area of the friction surface (4) than in the remaining layer by virtue of a lower proportion of resin in a surface layer (h).
