Abstract (en)

[origin: WO0144725A1] The invention concerns a cassette (1) comprising at least a elongated radiating body (2) housed inside a casing, consisting of at least a base (3) and side walls (4) and open (5) on the radiant side of the radiating body (2). Said cassette is characterised in that the radiating body (2) is maintained inside the casing resting point-to-point on insulating elements (6) each connected to the base (3) forming a beam of the casing, said connection being formed by elements (12) capable of elastic deformation to absorb expansion of the supported radiating body or bodies (2), at least a spring (7), arranged between the casing base (3) and the back of the radiating body (2) maintaining by pressure contact said radiating body (2) permanently pressed on the insulating elements (6). The invention is applicable to a cassette for heating and/or cooling and/or lighting.
