Abstract (en)
[origin: WO0126003A1] A computerized method and system for tracking orders implemented on a trading floor exchange is disclosed. The system is order-centric and is configured to route orders to a booth (110) and floor broker in accordance with a symbol associated with the particular security being traded. Floor brokers communicate with the trading system through handheld devices (114-116) connected to a handheld server (113) via a wireless interface. A specific protocol for communication between the handheld devices and the handheld server is also disclosed.
