Abstract (en)

[origin: WO0143083A1] The invention relates to a device or a method for processing bank notes, in particular for separating, counting, sorting and authenticating bank notes or valuable papers. Said device can be operated in a variety of operational modes. A display device is provided in order to select and display said operational mode. Such a device or method should be improved in such a way that operation of said machine can be learnt quickly and easily. Nevertheless, a high degree of flexibility should be retained. This is achieved by configuring the display device for displaying pictograms. Said pictograms have variable functions which can be selected via an input device.
