Abstract (en)
[origin: WO0133541A1] The invention relates to an installation for the wireless remote selection and wireless remote request of audio data stored in a data bank. The inventive installation enables the user to make, by remote request, a musical selection on his/her individual data bank, for example at home, and to access said audio data from any location. A person that is provided with the inventive installation can access the entire musical selection that s/her has installed at a fixed location. It is no longer necessary to preselect and carry around mobile sound-storage media, since all data are available for selection and access.
