Abstract (en)
[origin: WO0145434A2] The invention relates to the automatic redirection of calls from a stationary telecommunication terminal (1, 2, 3) to a mobile terminal (4). The stationary terminal comprises a detector (2, 3) that detects the presence of the mobile terminal (4) in its vicinity and that initiates a redirection of calls from itself to the mobile terminal (4) if the detector (2, 3) does not detect the presence of the mobile terminal (4). The redirection function is cancelled when the detector (2, 3) again detects the presence of the mobile terminal (4) after an interruption.
