Abstract (en)
[origin: WO0143502A2] The invention relates to a method and a device for displacing the Hi-Fi position (13) in a vehicle. The loudness levels that are transmitted by the loudspeakers (LF, LR, RF, RR) are measured on a reference position by means of a microphone (11) and according to frequencies. Said microphone is integrated into the car radio (10). The individual loudspeaker signals can then be changed specifically in loudness level and/or phase by means of the thus obtained data for displacing the Hi-Fi position to a desired location (13).
