Abstract (en)  
[origin: EP1238623A2] The method involves carrying out several calibration value measurements (KWM1-1,KWM2-1,KWM3-1) within the wash cycle (SP1,SP2) at respective times (t1-t3), at which clear water can be found at the sensor location with higher probability. At the initial operation of the appliance at the installation location, a predetermined reference value (RW0) is given for turbidity value measurements.
