Abstract (en)
[origin: EP1238686A1] A ski mountaineering kit (1) including a ski mountaineering boot (2), which can be used together with a ski mountaineering clamp assembly (6) having a front clamp (7) for the toe (15) of the boot (2), and a rear clamp (8) for the heel (18) of the boot (2). The boot (2) has a flexible portion (21) extending crosswise to the shell (12), close to the toe (15) and at the metatarsusphalanx articulation; and the kit (1) also includes a supporting device (3) attachable to the ski (4), behind and close to the front clamp (7), so as to be located, in use, beneath the flexible portion (21) of the boot (2) to prevent deformation of the flexible portion when the boot (2) is secured to both clamps (7, 8). <IMAGE>
