Abstract (en)
The coating process for a dry web of paper/cardboard to apply a coating of a liquid or paste medium, and especially a watery pigment suspension, uses a curtain applicator (2). The coating curtain (3) drops on to the outer surface (1b) of the moving web, to be drawn into the web by suction and be anchored within the web structure. The underpressure unit is located at the under surface (1a) of the web, at least at the point (P) where the coating curtain strikes the web surface. The web curtain coating applicator has a suction box to generate the underpressure, with a seal at the incoming and/or outgoing side e.g. as a scraper or brush, set against the web. The underpressure unit has a suction zone (5a) at the web support roller (4).
