Abstract (en)

[origin: FR2821635A1] The supporting structure consists of two or more arched frame members (1) with a central body (2) and side flanges forming guide channels (R1, R'1, R2) for the edges of curved cover panels (T). One pair of flanges is in the form of a detachable covering strip with cut-outs to receive accessory cross-members such as roller blind housings (12) or finishing plates, the strip being made from a material that is easily cut. One or more of the cover panels is able to slide in the frame member channels.
