Abstract (en)

[origin: EP1239497A1] The device has a housing with an actuating element (11), at least one switch element subjected to an operating force via the actuating element and movable or pivotable in a switching direction and contact points that can be closed by the switch element. There is an arrangement with a spring element for acting upon the switch element with a bias force perpendicular to the switching direction. Independent claims are also included for the following: a switch element.
