Abstract (en)
[origin: WO0145727A2] Compositions for the prophylactic and/or therapeutic treatment of viral diseases, preferably in poultry, comprising as essential active ingredients ribavirin and at least another antiviral agent or active chemical derivatives thereof and a stabilizing agent. Optionally, the compositions further comprise one or more antibiotics of the quinolone type, vitamins and/or preservatives. The compositions are stable upon storage in the form in which they are intended to be administered to poultry, i.e. by injection, orally or by spray. A combined therapy with vaccine or a combination with antibiotics is also possible. The invention concerns also the combined use of ribavirin and other antiviral agents for the treatment of animal viral diseases.
