Abstract (en)

[origin: WO0146054A1] The invention relates to a reel for wire elements for the inside wiring of buildings. According to the invention, said reel (1) comprises the following: a generally doughnut-shaped container (10) which has a cylindrical outer wall (11) with an axis A, an inner wall (12) that is also cylindrical and is coaxial to the outer wall, and an essentially even bottom (13) connecting the outer (11) and inner (12) walls perpendicularly to axis A, the outer wall (11) being provided with a side opening (14) to allow the passage of the wire elements; and a bobbin (20) for receiving the wire elements and for introducing into the container (10), comprising a cylindrical core (21) which can be fitted around the inner wall (12) and which is bordered by an annular flange (22) that rests on the bottom (13) of the container. The invention can be used for the inside wiring of buildings.
