Abstract (en)

[origin: WO0140607A1] The invention relates to an exterior door handle system and to a method for controlling a motor vehicle door lock system. The aim of the invention is to provide a system for identifying the actuation of an exterior door handle by simple and inexpensive means. To this end, the exterior door handle can be elastically deformed and the deformation is detected by a sensor to identify an actuation of the door handle.
