Abstract (en)
[origin: WO0139072A1] A transaction processing network that includes multiple transaction terminals having a wireless data communication device, a server, a first network linking the multiple transaction terminals to the server and a second network linking the server to multiple destinations. A first and second protocol are used for the first and second network, respectively, wherein the first protocol has lower overhead than the second protocol. The method of transaction processing by using the transaction processing network.
