Abstract (en)

[origin: US2003054836A1] The invention concerns a method comprising the following successive steps: reading with a reading device (31) data stored by an identifying transponder chip (10), and transmitting the read data to a mobile telephone (20) where to the reading device is connected, transmitting by mobile telephone to a control centre (1) a signalling message containing the data read by the reading device, reception at the control centre of the signalling message, and storing the data contained in the message received associated with data identifying the signalling message transmitter, and the time and date at which said message is received.
