Abstract (en)

[origin: EP1240880A2] The invention relates to a therapeutic elastic envelope, made from elastic textile and dimensioned such that, in use, at least a portion of the leg of a user is surrounded. The envelope comprises a less elastic portion that is positioned at a place where, during use of the envelope on the leg, expanding muscles are present below the skin of the user. In this way, high pressure pulses are exerted on the underlying leg segment during walking. <IMAGE>
