Abstract (en)

[origin: EP1241000A2] The method involves preparing a food packaging (L) in the inflated state and then lacquering it. The lacquering is then dried and the packaging is laid flat. The food packaging is spray-lacquered on its entire outer surface. It is prepared as an endless tube and the process is continuously carried out. An independent claim is also included for a device for carrying out the method.
