Abstract (en)
[origin: EP1241308A2] The positioning device has a rotating band (10) for doors and/or windows which is secured against a frame wall (11) by a first band (12). The positioning device is perpendicular to one edge of the band and can be brought into different positions by rotation around an axis. A positioning part has eccentric cams which grip the edge and a rim and or ribs which grip one another.
