Abstract (en)
[origin: EP1241696A1] Electromagnetic relay comprising a coil (4) and a core (3) connected to parts (1) and (2), such that when the coil is excited the magnetic circuit is closed and acts on moving part (5), which in turn and by means of insulating part (8) uniformly moves plates (6) and plastic indicator (22), which are welded or riveted to the bridges formed by conducting parts (10), which through support plate (11) are connected to the external terminals (12), where relay case (20) defines an upper recess (13) with a horizontal partition (14) housing a printed circuit (15), duly insulated from the contact block, where connection to the printed circuit (15) is through terminals (16) and (17). <IMAGE>
