Abstract (en)
[origin: WO0149596A2] The invention relates to a printing machine for processing sheets, comprising at least one flexographic or offset printing cylinder and at least one impression cylinder with at least one feed claw for guiding the sheets. The invention provides a versatile offset or flexographic printing machine for guiding sheets that is simple to adjust and cost-effective to produce, as a result of the fact that, in the guiding position for the sheets, the feed claw is completely enclosed by the cylinder which is defined by the circumferential surface of the impression cylinder.
