Abstract (en)
[origin: WO0149940A1] The invention relates to a unit (10) for the production of track elements (32), comprising a number of retaining devices (14), arranged serially in the longitudinal direction of the unit. Said units each comprise a base element (20), which can be moved on wheels (34) and at least one support device (28), connected at least indirectly thereto. The above is arranged, such that a section (30, 172) of a pre-assembled track element (32) may be placed thereon, in the alignment which essentially corresponds to that of the most recent fitting position. Furthermore, the above may be positionally adjusted relative to the base element (20).
