Abstract (en)

[origin: WO0140726A1] A mobile, motorized washing and drying apparatus (3) is described which includes a mobile cart or base (5) which is formed for the attachment of both a motorized washing device (11) and a motorized drying device. The motorized washing device is attached to the base and has a motor capable of pressurizing and discharging washing fluids for the washing and cleaning of something, for example, an automobile. The motorized drying device is also attached to the base and has a housing formed with an inlet and an outlet and a motor therein. The motor of the drying device has a shaft with a blade means attached thereto for producing an air flow. The drying device further has a hose extending from it to direct the produced airflow for drying something, for example, a freshly washed automobile. In some embodiments, the motor of the washing device and the motor of the drying device are both electric; and, in other embodiments the motor of the washing device and the motor of the drying device are both internal combustion type.
