Abstract (en)
[origin: FR2803429A1] The invention relates to an electromechanical contactor, comprising a mobile push-piece which is connected to the contact support and can be accessed via a front face. A cover in the form of a plate is removably mounted on the front part (10a) of the housing (10), on fastening elements (17, 19) provided for mounting an additional bloc. Said cover provides a means of masking the mobile push-piece (16) and has a transparent section (21) in front of the push-piece which prevents it from being activated manually without altering the ability of the device to display the state of the contactor.
