Abstract (en)

[origin: FR2822172A1] The shoring device (10) for a support wall (2) of an excavation (1) comprises a stabilization support (15) which is supported against the wall end (15a). A rigid support structure (12) is located inside the excavation and against the external wall (12a) of which the stabilization support is supported at its opposite end (15b) so that the interior of the structure defines a freely accessible work space (25). An Independent claim is included for the use of the shoring device.
