Abstract (en)

[origin: EP1243729A2] The bolt housing (1) contains a connecting rod (4) longitudinally moved by the thrust rod (3) and possessing a slanting slot (5) in relation to its direction of movement. A pin (6) fitting into the slot slides out, or pulls back a catch into or out of a closure piece. The catch consists of two expander tongues (7,8) linked to the pin and slid into and out of the bolt housing. The two expander tongues touch guides for the expander movement and have hooked ends.
