Abstract (en)
[origin: EP1243870A2] The heater (1) has a forward flow (7) pipe connected to the inflow opening (4) of a first radiator (2), and has a return flow (8) pipe connected to the outflow opening (5) of a second radiator. The at least two radiators are vertically superimposed. The entire hot water flows through the at least two radiators. In the case of more than two radiators, the inflow opening of one radiator is connected to the outflow opening of the previous radiator, and the outflow opening connected to the inflow opening of the next radiator, so that all the hot water flows through all the radiators.
