Abstract (en)

[origin: EP1243974A1] Disclosed is a single-layer type electrophotosensitive material which comprises a conductive substrate, and a photosensitive layer made of a binder resin containing at least an electric charge generating material and an electric charge transferring material formed on said conductive substrate, wherein said photosensitive layer contains a polyalkylene glycol compound represented by the formula $\text{A1-O-}\ddot{\text{A}}(\text{CH}_2)_m\text{-O}\ddot{\text{N}}\text{-A2}$ wherein A1 and A2 are the same or different and represent an alkyl or aryl group having 1 to 50 carbon atoms, or a group: $-\text{CO-R}_{<10>}$ ($\text{R}_{<10>}$ represents an alkyl or aryl group having 1 to 50 carbon atoms), m represents an integer of 1 to 5, and n represents an integer of 2 to 100, which is superior in wear resistance, sensitivity and gas resistance. <IMAGE>
