Abstract (en)  
The present invention relates to a reclining antenna pole composed of three different sections connected with articulated joints; it being provided that the bottom section is fixed to the ground, while the two upper sections, suitably controlled by means of a cable actuated by a winch, rotate towards the ground by minimum 90 DEG with respect to the lower sections, in such a way that the top section is placed in parallel overturned position with respect to the fixed bottom section. <IMAGE>
