Abstract (en)

[origin: WO0139653A1] The invention relates to an absorbent structure for cleaning surfaces. Said structure has areas or sections or mixtures comprising different material, these areas, sections or mixtures having either a primarily absorbent effect (1) or a primarily cleaning effect (3; 15, 16). The structure has a support structure (6) to which cleaning material (3) has been applied. The aim of the invention is to provide a structure with greater potential for variation and variants in terms of its cleaning and absorbency properties and/or effects. To this end, the inventive structure has a pocket or bag-shaped cavity (7; 14) in which pieces (1) or strips of highly absorbent material are located.
