Abstract (en)
[origin: WO0147404A1] The invention concerns a grip (1) whereon several protuberances (10, 11) and (14, 15) are formed at various distances from the shovel receptacle (2). The protuberances (10, 11) constitute catching points (A) with resistance to the insertion of the handle and unsnapping of the grip which is higher than that of the other catching point (B) formed by the protuberances (14, 15). Matching unlocking means are provided on the grip to facilitate unsnapping. The invention is applicable to shovels for household use.
