Abstract (en)

[origin: WO0149253A2] Oil-in-water type cosmetic or dermatological preparations containing an oil phase into which at least one UV filter substance is incorporated, and an aqueous phase. The difference in density between the oil phase and the aqueous phase (which can be determined with a DMA 45 -type calculating digital densitometer from the Chempro/PA company at a temperature of 25 DEG) does not exceed 0.01 g.cm<-3>. The invention also relates to a method for stabilizing O/W formulations.
